

**BUILT TO FISH. BUILT TO LAST.**

**TWO PATENTED FOAM TECHNOLOGIES.....**  
 For over 60 years Flambeau® has been manufacturing and delivering products based on a consistent drive to deliver unique, innovative products...and our fly fishing product line reflects this drive. Vertical Friction

Foam™ (VFF) is featured in our market leading Blue Ribbon™ Waterproof Fly Boxes and consists of rows of foam standing on end. The friction between the rows holds flies securely without ever having to pierce the foam. It is easier and quicker to take flies in and out of VFF than any other variation of slit foam available on the market today. Interlocking Friction Foam™ (IFF) is featured in our line of Crystal Fly Boxes and Fly Lockers. The friction between the rows of multi-colored foam holds flies securely without, again, ever having to pierce the foam. While most manufacturers struggle to figure out a better way to organize flies, we are excited to provide these two exciting technologies.

## Foam Fly Boxes

### With Magnetic Closure

Flambeau® Foam Fly Boxes are designed for the fly fisherman on the go. These lightweight boxes fit in a vest or pocket and float when dropped in the water. Produced from high density foam and secured with self-locking magnets, these boxes offer a great value while organizing a ton of flies.
